Sausage linking and hanging system is a specialized device used in sausage processing for the purpose of automatically linking sausages into chains and hanging them up. This system typically consists of conveying devices, linking devices, and hanging devices. During the processing, sausages are fed into the linking device through the conveying devices. After a series of processes, the sausages are automatically linked into chains. Then, through the hanging devices, the linked sausages are suspended at specified positions for subsequent processing and storage. This system boasts high automation, ease of operation, and high production efficiency, making it widely used in sausage processing lines.
