## Abstracts

The global SAW Filters Above 2.4GHz market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Surface Acoustic Wave Filters Above 2.4GHz refers to surface acoustic wave filters with operating frequencies of 2.4GHz and above. This type of filter is commonly used in wireless communication systems such as Wi-Fi, Bluetooth, ZigBee, etc. Since the 2.4GHz frequency band is widely used in wireless communication, the application of SAW filters in this frequency band is also quite extensive. In the frequency band of 2.4GHz and above, SAW filters usually use high-frequency piezoelectric crystal materials, such as LiNbO3, LiTaO3, etc., to achieve higher quality factors and lower insertion loss. At the same time, in order to meet the requirements of high-speed communication systems, this kind of SAW filter also needs to have faster response speed and higher bandwidth. SAW filters play an important role in wireless communication systems, they can effectively filter out interference signals and clutter, and improve the signal quality and reliability of the system. At the same time, SAW filters have the advantages of miniaturization, integration, and good stability, so that they can be widely used in various wireless communication devices.

United States market for SAW Filters Above 2.4GHz is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
