The SAW quadplexer is a combination of four filters, sharing a single node. The passband loading and isolation objectives for the quadplexer are the same as for the duplexer. There are Band 25/4 and Band 1/3 quads. A quadplexer allows two frequency bands to be connected to the antenna at the same time, which is useful for applications such as carrier aggregation (where a phone might need to receive both bands at the same time).
