Abstracts

The global SBA Exchange Resin market size is predicted to grow from US$ 416 million in 2025 to US$ 521 million in 2032; it is expected to grow at a CAGR of 3.3% from 2026 to 2032.

In 2024, global SBA Exchange Resin production reached approximately 210 kilotons?with an average global market price of around US$ 2,000 per ton, a single-line production capacity of approximately 2,000 tons/year, and a gross profit margin of approximately 20%-40%. SBA (Strong Basic Anion) exchange resin is an insoluble, bead-shaped polymer material that carries strongly basic quaternary ammonium functional groups, which can completely dissociate across a wide pH range and reversibly exchange anions with those present in water (such as Cl?, SO???, NO??, HCO??, SiO???). Built on a cross-linked organic matrix, typically styrene–divinylbenzene or an acrylic backbone, SBA resins are usually operated in the chloride or hydroxide form and are capable of removing both strong-acid anions and, in suitable configurations, weakly dissociated species like silica and CO?. Because their functional groups are “strong base”, they remain ionized even at low temperatures and low pH, giving them broad operating ranges and high affinity for many anions.

United States market for SBA Exchange Resin is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for SBA Exchange Resin is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
