According to this study, the global SCADA (Supervisory Control and Data Acquisition) market size will reach US\$ 14510 million by 2031.

SCADA (Supervisory Control and Data Acquisition) is an industrial automation system used to monitor, control, and collect data from remote and local industrial processes. It consists of a combination of hardware and software, including programmable logic controllers (PLCs), remote terminal units (RTUs), human-machine interfaces (HMIs), and communication networks. SCADA systems are widely used in industries such as energy, water treatment, manufacturing, oil and gas, and transportation, enabling real-time data acquisition, process automation, and centralized supervision to improve efficiency, safety, and operational reliability.

The SCADA market is expanding due to increasing demand for industrial automation, smart infrastructure, and energy management solutions. Key growth drivers include the rise of Industry 4.0, the adoption of IoT and cloud computing in SCADA systems, and the need for real-time data monitoring in critical industries. Leading companies such as Siemens, Schneider Electric, ABB, and Rockwell Automation are investing in advanced cybersecurity, AI-powered analytics, and edge computing to enhance SCADA capabilities. Challenges include high implementation costs, cybersecurity vulnerabilities, and integration complexity with legacy systems. However, the transition toward cloud-based SCADA and decentralized architectures is expected to drive market growth.
