The global SCARA Dispensing Robot market size is predicted to grow from US$ 158 million in 2025 to US$ 235 million in 2032; it is expected to grow at a CAGR of 5.9% from 2026 to 2032.

The SCARA dispensing robot is an automated device based on the SCARA structure (Selective Conformity Assembly Robot Arm) integrated with a professional dispensing system. Its core features include extremely high speed and positioning accuracy within a plane, combined with excellent vertical rigidity. Designed for high-speed, high-precision flat-surface dispensing operations, it precisely controls the dispensing valve's flow of adhesive, enabling rapid and consistent coating, filling, sealing, and bonding of workpieces such as circuit boards, screens, and chips. It is an indispensable core device in the electronics manufacturing industry. By 2025, the production of SCARA dispensing robots will reach 2,400 units, with an average global market price of approximately US$65,000 per unit.

The global SCARA dispensing robot market is expected to maintain rapid expansion in the future, driven by the growing demand for high-speed, high-precision flat coating in the consumer electronics, semiconductor packaging, and new energy battery industries. This technology, with its unparalleled speed, accuracy, and cost-effectiveness within a two-dimensional plane, has become a standard solution for large-scale automated production of chip packaging, circuit board coating, and component mounting. From a regional perspective, the Asia-Pacific region, with its dominant position in global consumer electronics and semiconductor manufacturing, will continue to be a strategic market with the highest demand and the most active innovation, with the Chinese market performing particularly well.
