A Schmidt coupling is designed to connect two parallel shafts with varying shaft center distances in rotating equipment, enabling efficient power transmission even when the shafts are not aligned.

The coupling consists of two flanged end disks and a central disk, connected by multiple links. These links are fitted with needle bearings to ensure smooth operation, with thrust washers and stoppers preventing disconnection. An oil seal and cap keep out contaminants, maintaining the integrity of the coupling.

The global Schmidt Coupling market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
