The global Scleral GP Material market size is predicted to grow from US\$ 23.48 million in 2025 to US\$ 48.29 million in 2032; it is expected to grow at a CAGR of 10.6% from 2026 to 2032.

Scleral GP (Gas Permeable) material is a highly oxygen-permeable, rigid plastic—typically fluorosilicone acrylate—used to manufacture large-diameter contact lenses that vault over the entire cornea to rest on the sclera. It provides superior comfort for severe dry eye, keratoconus, and corneal irregularities by creating a fluid-filled, moisture-retaining layer, offering durable, stable, and crisp vision correction.

In 2025, global scleral GP material production reached 8 tons, with an average selling price of USD 3,002 per kilogram. Total installed capacity was approximately 12 tons, and the industry gross margin was about 20%–30%. The cost structure consists of approximately 60% direct materials, 33% manufacturing overhead, and 7% labor. The industry chain comprises upstream fluorosilicone acrylate monomer and additive suppliers, and downstream scleral lens manufacturers, mainly including ABB Optical, Visionary Optics, Essilor, and CooperVision.

United States market for Scleral GP Material is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Scleral GP Material is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Scleral GP Material is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Global key Scleral GP Material players cover Bausch & Lomb (Boston Materials),
