The lead–acid battery was invented in 1859 by French physicist Gaston Planté and is the earliest type of rechargeable battery.

The Lead Acid Batteries market is primarily driven by the extensive use of these batteries in various industries, including automotive, industrial, and standby power applications. Lead acid batteries provide a reliable and cost-effective energy storage solution for a wide range of devices and systems. The demand for automotive lead acid batteries is bolstered by the growing automobile industry, while industrial applications rely on these batteries for backup power and energy storage. However, challenges include the competition from newer battery technologies like lithium-ion, which offer higher energy density and longer lifespan. Environmental concerns related to lead pollution and the need for proper recycling mechanisms are also significant challenges for the market. The market's success hinges on continued technological advancements to enhance the performance and sustainability of lead acid batteries, alongside effective recycling processes and regulatory measures to address environmental impacts.
