Scoring and cutting balloons are specialized medical devices used in angioplasty procedures to treat coronary artery disease. These balloons are equipped with small blades or scoring elements on their surface, which help in modifying and dilating the narrowed or blocked arteries more effectively than standard balloons. When inflated, these scoring or cutting elements create controlled incisions or scores in the arterial plaque, allowing for a more precise and efficient expansion of the artery. This process reduces the risk of arterial dissection and improves the outcomes of the angioplasty procedure, ensuring better blood flow and reducing the likelihood of restenosis.

The global Scoring and Cutting Balloons market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
