According to this study, the global Scrap Car Materials Recycling market size will reach US\$ 217354 million by 2031.

Scrap car material recycling refers to the systematic process of dismantling, sorting, processing, and reusing materials from end-of-life or technically obsolete vehicles. It aims to recover valuable resources such as metals, plastics, rubber, glass, fibers, and electronic components, minimizing waste and environmental impact. The process includes pre-treatment (like draining fluids), dismantling, shredding, sorting (magnetic separation, eddy current, density grading), material classification, and reprocessing. Scrap vehicles contain significant amounts of steel, non-ferrous metals (e.g., copper, aluminum), polymers, and rare metals (e.g., cobalt, lithium, rare earths), making them essential urban mineral resources. Efficient recycling supports green manufacturing and circular economy goals by reducing dependence on virgin materials and enabling the development of secondary steel, alloy, battery, and remanufacturing industries.

United States market for Scrap Car Materials Recycling is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
