The scraper film evaporator is a highly efficient evaporation equipment that uses a scraper system to evenly apply a thin film of liquid on the inner wall of the evaporator, increasing the contact area between the liquid and the hot surface, thereby improving the heat exchange efficiency. This equipment is particularly suitable for processing high-viscosity, easy-to-coke or heat-sensitive materials, such as the concentration and dehydration process in the chemical, food, pharmaceutical and other industries. The continuous scraping action of the scraper can effectively prevent the material from drying or scaling during the evaporation process.
