The global Scratch Resistant Polypropylene (PP) Compound market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Increasing usage of engineering plastics to comply with stringent legislations is likely to foster the market demand. Stringent regulatory norms, such as directives from the European Union and EPA to cut down carbon emission has triggered the need to reduce gross vehicular weight.

The auto sector is expected to emerge as the largest consumer of PP compounds and accounted for 55.3% of the market demand in 2018. Polypropylene compounds, owing to their excellent impact and scratch-resistance properties have been widely used in automobile interior applications. Even though the scenario is quite upbeat, volatile crude oil prices that might impede the PP compound growth. PP prices are directly dependent upon crude oil prices, as it is one of the key raw materials.
