A continuous screen changer is a machine that filters out impurities in the polymer extrusion process—without interrupting the process when a dirty screen needs to be changed. It's used in melt filtration processes where debris can clog up screens in a very short time and process disruptions are costly. Markets and extrusion processes that employ continuous screen changers include pipe and profile, film and sheet, compounding, resin production, blow molding, nonwovens, and specialty material.

Global Continuous Screen Changers key players include Nordson, Maag, JC Times, Gneuss, Parkinson Technologies, etc. Global top five manufacturers hold a share about 70%. North America is the largest market, with a share over 35%, followed by Europe, with a share about 30 percent. In terms of product, Continuous Belt is the largest segment, with a share over 50%. And in terms of application, the largest application is Packaging, followed by Building and Construction, Automotive, and Electrical and Electronic.
