A Screw Flowmeter is a type of positive displacement flowmeter that uses the interaction of one or more precision-machined screws to measure the volume of a fluid. As the fluid flows through the meter, it causes the screws to rotate. This rotation is then detected by sensors, typically Hall effect sensors, and converted into a frequency signal that is proportional to the volumetric flow rate. Screw flowmeters are known for their high accuracy, ability to measure viscous media, and operation at high pressures and temperatures.

United States market for Screw Flowmeter is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Screw Flowmeter is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
