A screw locking system is a device or integrated module used to automate screw tightening and is widely used in industrial assembly processes. The system utilizes components such as an electric or pneumatic actuator, a controller, a feeder, and a locking head to automatically feed, position, tighten, and inspect screws. Compared to manual operations, screw locking systems offer advantages such as high efficiency, high consistency, and strong traceability, making them particularly suitable for high-volume, multi-screw assembly. Modern systems often feature torque control, angle control, missed screw detection, and data logging to meet the needs of smart manufacturing and quality management. Leading companies such as Atlas Copco and Bosch Rexroth typically have an annual production capacity of approximately 20,000–50,000 units per year for handheld systems and 5,000–10,000 units per year for multi-axis systems.

United States market for Screw Locking System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Screw Locking System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
