A Screw Oil Press is a continuous oil extraction machine that uses mechanical pressure to process oilseeds. Its core working principle involves one or more rotating screw shafts inside a press chamber that continuously convey the oilseed forward while progressively compressing it. This generates high temperature and pressure, which squeezes and separates the oil from the solid meal (cake). Comprising mainly a feeding device, screw shaft(s), press cage, cake adjustment mechanism, and drive system, it is characterized by continuous operation, high oil yield, and strong adaptability. It is one of the most essential and fundamental oil processing equipments in the modern vegetable oil industry. The single line production capacity of Screw Oil Press is about 300 units, and the specific value is affected by the degree of automation, supply chain, and product complexity.
