A scroll compressor for a chiller is a type of positive displacement compressor that uses two interleaved spiral scrolls to compress refrigerant smoothly and continuously. One scroll remains stationary while the other orbits, trapping and compressing refrigerant in increasingly smaller pockets. Scroll compressors are known for their compact size, quiet operation, high reliability, and energy efficiency, especially at partial loads. They are widely used in small to medium-capacity chiller systems, particularly in commercial buildings, light industrial applications, and modular HVAC systems. Their simple mechanical structure and fewer moving parts contribute to lower maintenance needs and longer operational life.
