According to our LPI (LP Information) latest study, the global SD WAN Managed Services market size was valued at US\$ million in 2023. With growing demand in downstream market, the SD WAN Managed Services is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global SD WAN Managed Services market. SD WAN Managed Services are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of SD WAN Managed Services. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the SD WAN Managed Services market.

Unlike other network connectivity services, SD WAN managed service use application-driven networking where application traffic is forwarded over different WANs based on QoS, Security and Business priority policies. SD WAN must be operated by either the enterprise or by a service provider. Many enterprises today prefer to have a Communications Service Provider (CSP) or Managed Service Provider (MSP) to deliver a SD WAN managed service rather than own and operate the SD WAN themselves, since network management and operations is not their core business. CSPs and MSPs are now aggressively introducing SD WAN managed services to address the enterprise challenges and deliver agile, assured and orchestrated third network connectivity services leveraging SD WAN technologies.
