An SDI camera is a camera that features an SDI video connection. SDI video connections have a locking connector that can connect an SDI cable to another video device such as a recorder, a production system or a streaming encoder. SDI cameras can output video using an SDI cable connection. SDI cameras are generally used to provide video inputs to production systems. Video producers will use these SDI camera inputs to create a production which can be recorded or broadcast live. Video production switchers can be used to switch between multiple SDI camera inputs in order to tell a story and record video content that's visually appealing live. An SDI Camera is basically a camera that has an SDI video connection. Streaming systems and recorders can be connected to the SDI Camera to stream output video (high definition zoom video).
