## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

A sealed hot water cylinder is a water container that holds hot water under extreme pressure, drains it and provides instant hot water when a hot water faucet or appliance is turned on. Since the system is fully pressurized, there is no need to vent it to the atmosphere. Sealed hot water cylinders are a favorite among homeowners with pressurized central heating. When equipped with an external or built-in expansion vessel, a non-vented cylinder is especially desirable, saving domestic users space in the home as hot water is delivered under pressure and does not require bulky gravity cold water supply cylinders. Conversely, sealed cylinders feed directly from the cold water line, and since the water line enters at high pressure, flow and consistency from unvented cylinders tends to be more reliable.

The global market for Sealed Hot Water Cylinders is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

The APAC Sealed Hot Water Cylinders market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The United States Sealed Hot Water Cylinders market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.
