The sealed vacuum load switch is a medium-voltage switchgear that seals the vacuum interrupter and the operating mechanism in an insulating housing. It has load breaking, closing, short-circuit closing and other functions. It adopts a sealed insulation structure and has good dustproof, moisture-proof and corrosion-resistant properties. It is particularly suitable for operation in humid, dusty or corrosive environments. The device cuts off the current through the vacuum arc extinguishing principle and has the advantages of strong breaking capacity, long mechanical life, small size and maintenance-free. It is widely used in medium-voltage distribution networks of 12kV and below. It is one of the green and environmentally friendly alternatives to traditional SF6 switches or air load switches.
