The research report highlights the growth potential of the global Sealless Canned Motor Pumps market. Sealless Canned Motor Pumps are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Sealless Canned Motor Pumps. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Sealless Canned Motor Pumps market.

Canned Motor Pump is a centrifugal pump with hermetically sealed electric motor mounted on single shaft thus eliminating the requirement of mechanical seal or other sealing device. Entire rotating assembly is immersed in the liquid, and motor stator and rotor are isolated from the pumped liquid with corrosion resistant, non-magnetic liner and sleeve. A part of the pumped liquid is by-passed through the motor, for cooling of motor and lubricating the bearing.

Canned motor pumps are characterized by their compact and integrated design, with the motor and pump forming a single unit with the rotor and impeller fitted on to a common shaft. The rotor is guided by two slide bearings and the drive motor stator is separated from the rotor using a cylindrical metal can. The rotor compartment, together

with the hydraulic section of the pump, is filled with the pumped medium during operation. The heat loss from the motor is carried off by a partial flow between the motor and stator, and the flow also lubricates both slide bearings in the rotor compartment. The can, which is a hermetically sealed component, and the motor casing offer primary and secondary containment, respectively. It is this double containment design, together with the compactness and low noise level, and differentiates the canned motor pump from the magnetically coupled pump. The design makes canned motor pump 100% leak-free. Even in the unlikely event of a stator lime rupturing there is no leakage to the atmosphere. These factors make the canned motor pump ideally suited to the safe handling of hazardous and volatile organic compounds, particularly where high temperatures and high working pressures are encountered.
