Seamless casing and tubing are commonly used pipes in the oil and gas industry, playing an important role in the exploration, production, and transportation of oil and gas. Seamless casing is a type of steel pipe without welded joints, commonly used in wellbore structures for oil drilling and oil and gas wells. It is produced directly from steel billets through processes such as extrusion or rolling, and has higher strength and pressure resistance. Tubing usually refers to the pipeline used in oil and gas extraction operations to transport oil from oil wells to surface facilities. Tubing is placed in a well after drilling is completed and used in conjunction with casing to carry crude oil, natural gas, and related fluids.

In 2024, global Seamless Casing & Tubing production reached approximately 6,394 K MT, with an average global market price of around US$ 1,261 per MT.The annual production capacity of a single production line is 100,000 tons, with a gross profit margin of about 20%.
