Seaweed nutrient water retainer is a seaweed powder made from polysaccharides extracted from large red algae and brown algae. Seaweed nutrient water retainer is rich in nitrogen, phosphorus, potassium and other trace elements, as well as a certain amount of plant growth promoters, which are essential for plant growth. The water retainer has a significant water retention capacity, can absorb and store a large amount of water, and then slowly release it for plant use. This helps to reduce water evaporation and improve the water retention performance of the soil. After drying, the seaweed nutrient water retainer can still absorb water and swell, and restore water retention performance, which is particularly important for plant growth in arid areas.
