Second and third generation biofuels, also known as advanced biofuels, are part of an evolving effort to produce more sustainable and environmentally friendly fuel alternatives that do not compete directly with food supplies or contribute significantly to deforestation. Each generation offers unique advantages and faces distinct challenges.

Second generation biofuels are made from non-food biomass, including lignocellulosic materials like wood, grass, and non-edible parts of plants, or organic waste.

Third generation biofuels are derived from algae, which can be cultivated on non-arable land and typically have higher yield potentials than terrestrial biomass.

The global Second and Third Generation Biofuels market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
