The global Secondary Lithium Metal Batteries market size is predicted to grow from US\$ 2531 million in 2025 to US\$ 13360 million in 2031; it is expected to grow at a CAGR of 32.0% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

In this report, a Lithium Metal Secondary Battery refers to a lithium-ion battery. A lithium-ion battery or Li-ion battery (abbreviated as LIB) is a type of rechargeable battery. Lithium-ion batteries are commonly used for portable electronics and electric vehicles and are growing in popularity for military and aerospace applications.

As electric, electronic, communication and computer industries have been developed rapidly, high-capacity batteries have been increasingly in demand. In response to such demand, lithium metal secondary batteries using lithium metal or lithium alloy as a negative electrode having high energy density have been given many attentions. Lithium-metal batteries (LMB) are very attractive owing to their high theoretical energy density, but significant challenges such as low ionic conductivity and safety risks prevent their widespread application before. The vendors in the market are constantly investing in technology and innovations to produce application-specific Lithium-Metal Secondary Battery products. Many changes in terms of industry structure have been occurring downstream from the suppliers in the global Lithium-Metal Secondary Battery industry. Overall, the Lithium-Metal Secondary Battery market performance is positive, despite the weak economic environment.
