## Abstracts

The global Secondary Suspension Air Spring market size is predicted to grow from US\$ 1535 million in 2025 to US\$ 1912 million in 2031; it is expected to grow at a CAGR of 3.7% from 2025 to 2031.

Within the secondary suspension between the bogie and the vehicle body, our air spring systems provide for the flexible mounting of the vehicle body. Air springs have a low natural frequency, which minimizes the transmission of vibrations. They decouple it from the majority of track irregularities, while also allowing the bogie to turn as the train negotiates bends.
