The anti-theft alarm system uses physical methods or electronic technology to automatically detect intrusions that occur in the armed monitoring area, generate an alarm signal, and prompt the on-duty personnel in the area where the alarm occurs, and display the system that may take countermeasures. The burglar alarm system is an important facility to prevent accidents such as robbery and theft. Once an emergency occurs, the location of the accident can be accurately displayed in the security control center through sound and light alarm signals, so emergency measures can be taken quickly. The anti-theft alarm system together with the entrance and exit control system, CCTV monitoring system, visitor intercom system and electronic patrol system constitute a security protection system.
