Abstracts

The global Security Camera SOC market size is predicted to grow from US\$ 703 million in 2025 to US\$ 979 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

SoC (System on Chip) is a highly integrated microchip. SoC usually has a built-in central processing unit (CPU) and a graphics processing unit (GPU), and adds processing cores such as image signal processor (ISP), neural network processor (NPU), multimedia video codec and audio processor according to the needs of the usage scenario. There is a high-speed bus inside the chip that is responsible for data transmission between each processing unit and the external interface. It is also equipped with flash memory interface, storage interface, display interface, network interface and various high-speed and low-speed data transmission interfaces. SoC can process digital signals, analog signals, mixed signals, and even radio frequency signals, and is often used in embedded systems.

Security camera SoCs (video surveillance SoCs) are divided into front-end and back-end components. These primarily include front-end ISPs and IPC SoCs, and back-end DVR SoCs and NVR SoCs. Different chips integrate different functions. For example, IPC SoCs integrate the CPU, ISP, video codec module, and network interface module, while some chips also integrate video analytics.

Key global manufacturers include SigmaStar, Hisilicon, Ambarella, Fullhan, Hunan Goke Microelectronics, Allwinner Technology, Guangzhou Anyka Microelectronics, and TI.
