A security smoke generator, also known as a smoke screen, is a security device designed to deter intruders, protect property, and enhance security in the event of a break-in or unauthorized access. When triggered, a security smoke generator rapidly releases a dense, non-toxic fog or smoke into the protected area, obscuring the intruders' vision and making it difficult for them to proceed with their activities.

The fog or smoke produced by security smoke generator is typically non-toxic, safe for humans and pets, and leaves no residue. It is safe for use in enclosed spaces. The effects of the fog are temporary and last only as long as the device is activated. Once deactivated, the fog dissipates naturally without leaving any lasting impact. The sudden appearance of dense fog, coupled with the noise generated during the fog system's

operation, serves as a strong visual and auditory deterrent to potential intruders. These systems can be integrated with existing security systems, including alarms, surveillance cameras, and access control, to provide a comprehensive security solution.

Security smoke generator are commonly used in a variety of commercial and industrial settings to enhance security. They are particularly effective at discouraging intruders and protecting property during attempted burglaries or break-ins. It's important to follow local laws and regulations when using security smoke generator and to ensure that they are integrated as part of a comprehensive security strategy that includes alarms, surveillance, and access control.
