Abstracts

The global Security Surveillance Camera Lens market size is predicted to grow from US\$ 2029 million in 2025 to US\$ 2871 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

Security Surveillance Camera Lens is an optical component that focuses light onto a camera sensor to produce clear video, defining the camera's field of view and detecting details. Measured in millimeters (mm), it determines how wide or far a camera sees, with options ranging from wide-angle for broad coverage to telephoto for long-distance zooming.

In 2025, global Security Surveillance Camera Lens sales volume reached approximately 345 million units, with an average price of approximately US\$ 6 per unit.

1. Higher resolution, larger image sensors, and better low-light performance are upgrading CCTV lens specifications. The surveillance camera market is moving from basic HD/2MP products toward 4MP, 5MP, 8MP/4K and higher-resolution cameras, which requires lenses with higher MTF performance, lower distortion, better edge clarity, and better day/night focus consistency. Hikvision's 4K surveillance systems emphasize clearer imaging and low-light performance, while its low-light camera lines also use large-aperture designs such as fixed F1.0 lenses for color night imaging. This trend increases demand for IR-corrected lenses, large-aperture lenses, low-dispersion optical design, better coating, and larger-format lenses such as 1/2.8", 1/1.8" and above. For lens suppliers, the market is gradually shifting from low-cost plastic-lens assemblies to higher-value hybrid glass-plastic or all-glass lens modules in mid- to high-end surveillance cameras.

2. AI surveillance, smart city projects, and multi-sensor cameras are increasing demand for wide-angle, low-distortion, motorized zoom, and panoramic lenses. AI cameras need more stable and higher-quality image input for face detection, vehicle recognition, behavior analysis, perimeter protection, people counting, and object tracking, so lens quality directly affects algorithm performance. Recent smart surveillance products show this direction clearly: 4K cameras with AI object tracking, dual-lens designs, panoramic plus telephoto combinations, and on-device AI search are becoming more common in consumer and professional security products. For the CCTV lens market, this means fixed focal lenses still dominate shipment volume, but higher-value products such as motorized zoom lenses, fisheye/panoramic lenses, dual-lens modules, and long-focus lenses are gaining importance in smart city, traffic, public safety, industrial parks, campuses, and commercial buildings.

3. Product structure is polarizing: mass-market fixed lenses remain price-sensitive, while high-end professional lenses gain value share. Residential and small commercial cameras continue to use large volumes of low-cost fixed focal M12 lenses, especially 2.8 mm, 3.6 mm, 4 mm and 6 mm types. However, professional applications increasingly require varifocal lenses, motorized zoom lenses, telephoto lenses, ultra-wide-angle lenses, and lenses compatible with larger sensors and 4K/8MP imaging. Security camera lens market segmentation commonly separates fixed lens, varifocal lens and zoom lens, which reflects this value difference: fixed lenses dominate volume, while zoom and motorized lenses contribute higher unit prices and margins.
