A Security Turnstile Gate is a type of access control device specifically designed to regulate the flow of people and provide enhanced security measures in various environments, such as public buildings, transportation hubs, stadiums, and restricted areas.

Security Turnstile Gates typically consist of a rotating barrier or gate that allows only one person to pass through at a time. The turnstile is equipped with access control systems that require individuals to present valid credentials, such as access cards, key fobs, or biometric identifiers, to gain entry. Security turnstiles play a crucial role in enhancing security, preventing unauthorized access, and maintaining controlled access to restricted areas. They help manage the flow of people, monitor entry and exit points, and provide a visible deterrent against unauthorized entry attempts. These devices contribute to the overall safety and security of facilities by ensuring that only authorized individuals are granted access.
