Sedimentation balance is a precision instrument used to test the size and distribution of solid particles. It is mainly composed of a high-precision electronic balance, a sedimentation system, and data processing software. Sedimentation balance is a device that uses physical methods to test and analyze the particle size of solid particles through the gravity sedimentation process of particles in a liquid medium. It is based on Stokes' law and calculates and infers the particle size and distribution by measuring the sedimentation velocity or cumulative mass of particles in liquid.

The global Sedimentation Balance market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
