The global Seed Vigor Testing Service market size is predicted to grow from US\$ 147 million in 2025 to US\$ 223 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

Seed vigor testing service refers to a standardized and scientific testing and analysis service provided by professional laboratories or institutions. Its core purpose is to assess the germination ability, growth potential, and stress resistance of seeds under non-ideal field conditions, rather than simply measuring their germination rate under optimal laboratory conditions. This service predicts field emergence rates, seedling uniformity, and robustness by simulating or directly testing seed performance under adverse conditions (such as low temperature, high temperature, drought, disease, and aging), providing crucial seed quality decision-making support for agricultural producers, seed companies, traders, and research institutions. Demand primarily stems from the industry's rigid requirements for sowing reliability. Traditional germination rate methods cannot predict seed performance in complex field environments, leading to risks of uneven emergence and replanting losses for farmers, while seed companies bear the costs of quality disputes and brand reputation damage. Therefore, the core driving force behind this service is to reduce agricultural production risks and protect seed value and brand reputation. Its upstream suppliers are the testing service providers, including research institutions, industry associations (such as ISTA), and instrument manufacturers that provide standardized testing methods, reagents, and equipment. Downstream customers are the core clients, including seed companies (for internal quality control and variety breeding), large farms/growers (for seed purchasing decisions), seed research institutions, and government regulatory agencies (for arbitration and certification). The average price of seed viability testing services in 2025 is estimated at around \$100, with a gross profit margin of approximately 45%.
