These mats are made from various materials, including wood fiber, non-woven vinylon fiber, and artificial mineral fibers primarily composed of silica and calcium. Key characteristics include lightweight, air permeability, moisture retention, and water permeability. Some mats also have applied fertilizer components like phosphate and potash.

Seedling mats are primarily used in the cultivation of rice seedlings, often referred to as paddy rice seedling mats. They are also effective for growing vegetables and garden plants, especially those sensitive to cold and root disturbances.
