The global Seismic Rubber Bearing and Isolator market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Seismic Rubber Bearings and Isolators are specialized devices used to protect structures from the damaging effects of earthquakes by isolating the building or structure from ground motion. They are often installed between a building's foundation and its superstructure, allowing controlled movement during seismic events, which reduces the forces transmitted to the structure above. These systems are essential in earthquake-prone areas, providing protection for bridges, buildings, and other critical infrastructure.
