Powder-spreading metal 3D printing is an important branch of metal additive manufacturing technology. This technology uses metal powder pre-placed on a powder platform as raw material, based on the three-dimensional digital model of the part, and uses high-energy beams such as lasers or electron beams to melt the powder layer by layer on a series of two-dimensional planes discrete from the three-dimensional model, and finally manufacture three-dimensional metal parts. Currently, the most widely used is powder-spreading metal 3D printing that uses laser as an energy source, also known as Selective Laser Melting (SLM).
