## Abstracts

The global Selenium Telluride market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Selenium telluride (SeTe) is a compound composed of selenium and tellurium, two chalcogen elements from the periodic table.

**Growing Demand in Infrared Technology:** Selenium telluride is used in the production of chalcogenide glasses, which have applications in infrared technology. With the increasing use of infrared technology in various sectors, including defense, industrial, and automotive, there could be a growing demand for selenium telluride.

**Fiber Optics and Telecommunications:** Selenium telluride is a crucial component in chalcogenide glass fibers used in telecommunications and fiber optic communication systems. The expansion of high-speed internet and 5G networks may drive the demand for these fibers and, by extension, selenium telluride.

**Optoelectronics and Photodetectors:** Selenium telluride is used in the manufacture of photodetectors sensitive to infrared light. As the demand for infrared sensors and photodetectors continues to grow in applications like surveillance, remote sensing, and medical devices, there may be an increased demand for selenium telluride.
