A self-adhesive sterilization indicator tape is a specialized adhesive tape used in medical, dental, and laboratory settings to securely seal sterilization packages while providing a visual confirmation that the package has been exposed to a sterilization process. The tape is coated with a chemical indicator that changes color when subjected to specific sterilization conditions, such as steam, ethylene oxide (EO), or dry heat, indicating that the package has undergone the intended treatment. Made from durable, heat-resistant materials, the tape adheres firmly to paper, cloth, or plastic packaging without compromising the sterility of the contents. It is easy to apply, tear by hand, and label with relevant information, making it a practical tool for tracking sterilization status. Self-adhesive sterilization indicator tape plays a vital role in infection control by helping ensure the effectiveness of sterilization procedures and maintaining the safety and integrity of sterile instruments.
