A self-aspirating septic aerator is a device used in septic systems to introduce air (oxygen) into the wastewater. Unlike other aerators that rely on external air sources or pumps, a self-aspirating aerator automatically draws in air from the atmosphere as it operates. This process enhances the aerobic digestion of waste by providing oxygen to the bacteria that break down organic matter, which helps in reducing odors, treating wastewater more effectively, and preventing the buildup of sludge in the septic tank. These aerators are typically designed to be energy-efficient and require minimal maintenance.

United States market for Self-aspirating Septic Aerator is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
