Product Description Self-cleaning filter is an indispensable means of treatment during the purification process of filtering water, it is used to intercept the impurities in water, to purify water or protect the normal work of other equipment in the system.

Air filtration products are terminal products, which are highly technology-intensive and require high product development technology and design experience. At the same time, they are highly dependent on imported components from abroad. The core components in the industry are concentrated by several foreign upstream suppliers. Monopoly, its production capacity and bargaining space limit the healthy development and fully competitive market situation of the domestic air filtration industry. In order to meet the goal of domestic downstream customers to produce more competitive products and enhance the competitiveness of global products, domestic enterprises urgently need to develop more stable key components of air filtration, so as to get rid of the shackles of imported components on the domestic air filtration industry.
