The global Self Driving Minibus market size is predicted to grow from US$ 1625 million in 2025 to US$ 3935 million in 2032; it is expected to grow at a CAGR of 13.7% from 2026 to 2032.

Self Driving Minibus is a smart car, usually a driverless electric bus with a short length and a limited number of passengers. It relies on advanced autonomous driving technology to travel without manual operation of the steering wheel, accelerator and brake. It is designed for open roads or specific areas in cities to achieve safe and efficient public transportation services.

As environmental awareness increases, green travel methods such as public transportation are becoming more popular. At the same time, due to the increasing traffic congestion in large cities, the efficiency of private car travel continues to decline. According to this forecast, by 2035, the proportion of private car travel mileage in major cities around the world may decrease by about 15%, and public transportation and small means of transportation are expected to become the main travel options. The Japanese government has set a goal of achieving Level 4 autonomous driving unmanned transportation services in 50 locations across the country by 2025 and in 100 locations by 2027. China's unmanned driving market is leading in both technology and penetration, and deserves special attention.
