A self-flow air classifier is a device used for material classification and separation, widely applied in the powder industry. This equipment utilizes high-speed air flow to transport materials to the classification area, where different particle sizes are separated by adjusting the speed and direction of the air flow. Smaller particles remain suspended in the air flow and rise, while larger particles fall due to gravity, achieving the classification purpose. Self-flow air classifiers offer advantages such as simple operation, high classification precision, and efficiency, making them suitable for various industries, including chemicals, mining, food, and pharmaceuticals.

United States market for Self-flow Air Classifier is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Self-flow Air Classifier is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Self-flow Air Classifier is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
