The global Self-priming Magnetic Pump market size is predicted to grow from US\$ 404 million in 2025 to US\$ 564 million in 2031; it is expected to grow at a CAGR of 5.7% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The self-priming magnetic pump is a kind of non-contact torque transmission through a magnetic actuator. It uses a static seal instead of a dynamic seal to make the pump completely leak-free. It consists of three parts: a self-priming pump, a magnetic actuator, and an electric motor. The key component, the magnetic actuator, consists of an outer magnetic rotor, an inner magnetic rotor, and a non-magnetic isolation sleeve. It has many features such as good internal sealing and reduced energy consumption. When using it, attention should be paid to preventing particles from entering, dry friction and other issues and problems.

With the continuous development of artificial intelligence and Internet of Things technology, the self-priming magnetic pump industry will gradually realize intelligent production and management. The application of intelligent technology can improve production efficiency and quality, and can also better meet user needs and improve user experience.
