Abstracts

The global Self-propelled Modular Trailer(SPMT) market size is predicted to grow from US$ 1891 million in 2025 to US$ 3536 million in 2031; it is expected to grow at a CAGR of 11.0% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

A self propelled modular trailer (SPMT) is a platform heavy hauler with a large array of wheels which is an upgraded version of a hydraulic modular trailer. SPMTs are used for transporting massive objects, such as large bridge sections, oil refining equipment, cranes, motors, spacecraft and other objects that are too big or heavy for trucks. Ballast tractors can however provide traction and braking for the SPMTs on inclines and descents.

SPMTs are used in many industry sectors worldwide such as the construction and oil industries, in the shipyard and offshore industry, for road transportation, on plant construction sites and even for moving oil platforms.

The demand for large-scale projects and oversized cargo transportation is growing, and the transportation demand for super-large components in the fields of petrochemicals, electricity (such as wind turbine blades, nuclear reactors), aerospace (rocket components) is increasing. Modular construction of bridges and large-scale lifting equipment in ports require flexible and high-load transportation solutions. Modern projects tend to be prefabricated in factories + on-site assembly, and SPMT can efficiently transport prefabricated modules.

Traditional trailers require multiple vehicles to be spliced, and SPMT can quickly form a team to save time and labor costs. In ports, factories, construction sites and other scenarios, the flexible configuration of SPMT reduces the dependence on special equipment. High load capacity (up to 1,000 tons) reduces the number of transportation times and reduces the overall cost.

With the increase in cross-border projects, international EPC projects require standardized and highly compatible transportation equipment. Leading companies seize the market through technological innovation.
