The global Self-Recovery Smart Materials market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

For building and construction projects, concrete is a common material. It is frequently used to build infrastructure, including dams, ports, storage tanks, roads, tunnels, and subways. Despite being robust and long-lasting, it is prone to cracking, which lets various unwelcome aggressive chemicals and other materials seep in. To treat such damages, active treatment methods like self-healing techniques are used.

Self-Recovery Smart Materials are those smart materials that, after suffering damage, damage, cut or fracture, can return to their original state causing their own repair.
