The global Self-service Book Lending Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

A self-service book lending machine is a type of automated system that allows users to borrow books without the need for human assistance. These machines are typically located in libraries or other public spaces and provide a convenient way for people to access books at any time, even when the library is closed.

Users can browse the available books using a touchscreen interface or by scanning the book's barcode. Once they have selected a book, they can check it out by scanning their library card or entering their library account information. The machine will then dispense the book, and the user can take it home to read.

When the user is finished with the book, they can return it to the machine by scanning it or placing it in a designated slot. The machine will automatically update the user's account to indicate that the book has been returned.

Self-service book lending machines are designed to streamline the borrowing process and reduce the need for library staff to handle book checkouts and returns. They provide a convenient and efficient way for people to access books, especially outside of regular library hours.
