Self-service consignment equipment refers to automated systems and machinery designed to enable businesses to manage and distribute products on a consignment basis with minimal human intervention. Consignment is a business arrangement where a supplier or manufacturer places their products in a retail or distribution location, and the retailer only pays for the products when they are sold. Self-service consignment equipment facilitates this process by automating inventory tracking, sales transactions, and payment collection.

The integration of sophisticated inventory management software with self-service consignment equipment allows businesses to monitor stock levels in real-time. This trend includes features like automated reordering and inventory optimization algorithms to prevent stockouts and overstock situations.
