A self-service UV book sterilizer is an intelligent device that uses ultraviolet (UVC) technology for disinfection, commonly applied in libraries, schools, and bookstores. By exposing books to high-intensity UVC light, it disrupts the DNA or RNA of bacteria and viruses, achieving rapid sterilization. Users simply place books inside and start the process, which usually takes less than a minute to disinfect and remove dust. The device is equipped with a self-service interface and protective features to prevent UV leakage, ensuring both user safety and convenient operation. The upstream of self-service UV book sterilizers mainly includes core components and technology suppliers, such as ultraviolet lamps/UV LEDs, air filtration systems, motors, sensors, fans, etc. The downstream application areas are primarily concentrated in public reading and education scenarios, including public libraries, university and primary and secondary school libraries, bookstores, and archives.
